

Hazem Ragab Mohammed

Backend Software Engineer

+20 1060404916 | h.ragab.dev@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [LeetCode](#)

Professional Summary

Backend Software Engineer with production experience across Node.js/TypeScript and .NET, building real-time communication services, distributed systems, secure APIs, and enterprise platforms. Experienced in performance debugging, multi-instance coordination, automated testing, and backend system design.

Work Experience

Intella | Backend Engineer

Apr 2026 - Present

Cairo, Egypt | Hybrid

- Build and operate Node.js/TypeScript services for real-time voice and messaging integrations across WebSockets, SIP, and external communication platforms.
- Solved multi-instance session coordination by moving shared metadata and state to Redis, allowing HTTP setup and subsequent WebSocket connections to work across independently routed pods.
- Diagnosed a production performance regression caused by code obfuscation and validated the fix with Prometheus/Grafana instrumentation, reducing p99 event-loop lag from ~347 ms to ~10 ms.
- Built automated end-to-end and load-testing tooling with Playwright and synthesized speech to simulate real calls and measure latency/audio degradation under concurrency; adopted and extended by QA.

DP World | Software Engineer

Jun 2025 - Apr 2026

Suez, Egypt | Hybrid

- Designed and built the backend for a multi-tenant finance, contracts, and billing system from scratch, owning the database schema, APIs, and tenant isolation with EF Core global query filters.
- Built a reusable NuGet file-validation package using MIME and magic-byte checks to block spoofed uploads; verified it against 18,000+ test files and enabled reuse across team projects.
- Took ownership of a core port-operations platform for truck, vessel, and container scheduling and movements; delivered rail and finance features, maintained integrations, and resolved production issues.
- Automated reconciliation of paid-but-unsettled receipts with a .NET Worker Service, including payment-provider verification, bounded retries, multi-receipt orders, and synchronized settlement across systems.

Freelance | Software Engineer

Mar 2023 - May 2025

Remote

- Built production backends with Flask, .NET Core, Laravel, PostgreSQL/PostGIS, and Redis, including geospatial search, caching, payments, logistics, and external API integrations.
- Owned freelance projects from requirements through deployment, delivering real-time, social, and commerce features with SignalR/Agora, OTP, maps, and OAuth.

Education

B.Sc. Computer Science | Suez University | 2023

Ranked 1st in class, GPA 3.91/4.0

Web Development Intensive | Information Technology Institute (ITI) | 2021

.NET track

Technical Skills

Backend

TypeScript, Node.js, C#, .NET Core, Python, Flask, REST APIs, WebSockets, SIP

Data & Infrastructure

PostgreSQL, Microsoft SQL Server, Redis, PostGIS, Docker, Kubernetes, Linux, Azure, Prometheus, Grafana, Git, GitHub Actions, Continuous Integration/Continuous Delivery (CI/CD)

Engineering

Distributed systems, concurrency, observability, system design, API design, authentication & authorization, application security, performance debugging, end-to-end testing, load testing, Playwright
