

Hazem Ragab Mohammed

Backend Software Engineer

+20 1060404916 | h.ragab.dev@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [LeetCode](#)

Professional Summary

Backend engineer focused on Node.js/TypeScript, real-time and distributed systems, Redis, APIs, concurrency, and production reliability. Enterprise experience at Intella and DP World, backed by end-to-end freelance product delivery.

Work Experience

Intella | Backend Engineer

Apr 2026 - Present

Cairo, Egypt | Hybrid

- Build and operate a Node.js/TypeScript real-time audio relay integrating browser WebSockets with Genesys Cloud and Ameyo contact-center platforms.
- Designed Redis-backed coordination and shared quota accounting for concurrent sessions, eliminating a 5x over-consumption case where five callers could each spend the same remaining quota.
- Reduced worst-case recording finalization for a 60-second silence gap from 18.3s to 222ms (99%) by redesigning silence materialization and adding regression coverage.
- Identified authentication and session-security risks and contributed architecture decisions for safer identity, token, and abuse-control flows across backend, frontend, and AI teams.

DP World | Software Engineer

Jun 2025 - Apr 2026

Suez, Egypt | Hybrid

- Built and maintained enterprise .NET Core/Angular applications across Finance, Logistics, and Safety, including worker services that automated financial data processing.
- Refactored legacy systems, delivered new features, and resolved production issues to improve stability of operational tools.

Freelance | Software Engineer

Mar 2023 - Aug 2025

Remote

- Built production backends with Flask, .NET Core, Laravel, PostgreSQL/PostGIS, and Redis, including geospatial search, caching, payments, logistics, and external API integrations.
- Delivered real-time, social, and commerce features using SignalR/Agora, OTP, maps, OAuth, and client-facing end-to-end product ownership.

Education

B.Sc. Computer Science | Suez University | 2023

Ranked 1st in class, GPA 3.91/4.0

Web Development Intensive | Information Technology Institute (ITI) | 2021

.NET track

Technical Skills

Backend

TypeScript, Node.js, C#, .NET Core, Python, Flask, REST APIs, WebSockets

Data & Infrastructure

PostgreSQL, Microsoft SQL Server, Redis, PostGIS, Docker, Kubernetes, Linux, Azure, Prometheus, Grafana, Git, GitHub Actions, Continuous Integration/Continuous Delivery (CI/CD)

Engineering

Distributed systems, concurrency, observability, authentication, authorization, security, performance debugging, unit testing, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), SOLID principles
